

Cooling Screener MSK

Cooling and screening of bulk material in one step!

Imagine, you have bulk material, which is too warm to be packed right after a processing step and it needs (protective) screening as well! Maybe you spatially limited at your current location at the moment? For those and other problems the MINOX Cooling Screener MSK is made.

With the possibility of cooling the material down and screening it at the same time, our MINOX Cooling Screener MSK offers a real alternative.

Why?

The MINOX Cooling Screener MSK is a new development based on the MINOX Tumbler Screeners MTS.

This gives you the MINOX Cooling Screener MSK with almost all the features that you already know from the MINOX Tumbler Screeners MTS. So you can choose of a large number of design versions (the diameter and the number of

screens, as well as different anti-blinding systems), so that the machine meets exactly your requirements. Also, the modular design for easy handling could mostly be maintained.

The MINOX Cooling Screener MSK can be integrated ideal and easily into any process of raw material processing. Of

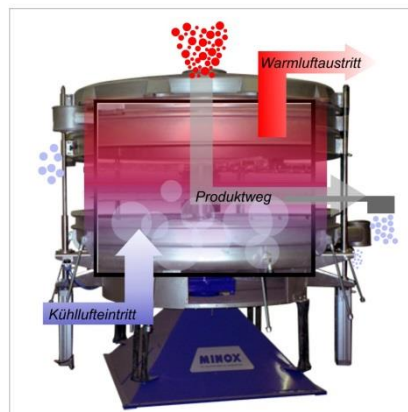

course the MINOX Cooling Screener MSK is dust tight, complies with work safety standards and is built from stainless steel according to the special

Advantages of the Cooling Screener –

for your processes

Only one step, thus:

- lower consumption of energy
- less processing time
- gentle treatment of material

requirements of the food and pharmaceutical industries.

Fields of application

The fields of application for the MINOX Cooling Screener MSK are virtually unlimited. Whether bulk material has to be cooled after a heat process and a screening - whether a simple protective screening or deposition of fine particles or an extensive separation into different fractions seems necessary - the MINOX Cooling Screener MSK is perfect for it.

Plant construction

The MINOX Cooling Screener MSK is being offered as individual component or as part of an overall solution as well. MINOX and **ps: perfect solutions** offer project planning, construction and permanent support.

Advantages of the Cooling Screener –

for your company

Only one machine, thus:

- cheaper in purchase
- less use of space
- elegant plant design
- fewer lifting plants and conveyor tracks
- less delay for cleaning and maintenance
